ThermalTherapeutic Systems, Inc. Enters into Strategic Alliance with SunStone Management Resources

Unique Partnership Leverages Medical Innovation and Business Acumen to Help Health Care Institutions Create Economically-Sustainable Patient Treatment Centers

Pittsburgh, PA – [ThermalTherapeutic Systems, Inc.](http://www.thermaltherapeutics.com), a Pittsburgh product development company and maker of the [VERATHERM Portable Hyperthermic Perfusion System](http://www.thermaltherapeutics.com), has partnered with [SunStone Management Resources](http://www.sunstonemr.com), a Harrisburg-based firm that offers business advisory services to hospitals and healthcare institutions nationwide. The partnership offers medical institutions a new resource for identifying innovative medical solutions that they can use to create centers of excellence to enhance the quality of patient care and extend patient lives.

“Hospitals today may be struggling financially to deliver quality care in the face of extreme political, economic, and societal challenges. Many of our most prestigious institutions realize they jeopardize their ability to provide ongoing, quality care to the communities who depend on them unless they themselves are healthy. This is where we fill a need,” said Greg St. Clair, Managing Principal, SunStone Management Resources. “Our professionals have many years of experience helping healthcare institutions develop, implement, and maintain effective business plans.”

“One of the most important steps we help hospitals take is to identify potential patient treatment areas and develop best management practices around them. Our agreement with ThermalTherapeutic Systems takes this business planning one step further. It allows us to introduce cost-effective, medical practice solutions to select hospitals who might not know they exist and whose patients might benefit from them,” said St. Clair.

Founded in 2006 by a team of experts in the field of hyperthermic perfusion, medical device manufacturing, molecular diagnostics and technology commercialization, ThermalTherapeutic Systems is the developer of the [VERATHERM™ Portable Hyperthermic Perfusion System](http://www.thermaltherapeutics.com). Designed for perfusionists, physicians and researchers involved in the field of hyperthermic and normal-thermic perfusion, the VERATHERM System is a small, lightweight, mobile device that precisely delivers and circulates heated and unheated sterile fluids. It has recently been used in the treatment of cancer.

“Our device enables a new standard in the delivery of hyperthermic perfusion, offering hospitals, clinics, and other health care institutions an opportunity to remain competitive and manage costs more effectively,” said Raymond F. Vennare, CEO of ThermalTherapeutic Systems. “We’re pleased to be

working with SunStone Management Resources, an organization whose mission – to bring intelligent solutions to the health care community – very much aligns with ours.”

About ThermalTherapeutic Systems: Founded in 2006 by a team of experts in the field of hyperthermic perfusion, medical device manufacturing, molecular diagnostics and technology commercialization, ThermalTherapeutic Systems is the developer of the **VERATHERM™ Portable Hyperthermic Perfusion System**.
